This brochure summarises data from the annual Community Conservation Report. The full report is available as a PDF at www.nacso.org.na or as a printed report at the NACSO office in Windhoek.

Community conservation in Namibia

A status summary of communal conservancies, community forests and other CBNRM initiatives

Summary 2014/15
a little history... The earliest community-based conservation initiatives in Namibia, which grew into what is today the national CBNRM programme, started before Independence, when the first community game guards were appointed by local headmen in an attempt to reverse wildlife declines. At the time, people living in communal areas had to live with wildlife... Wild animals were seen as little more than a threat to crops, livestock and infrastructure, as well as community safety. Ground-breaking legislation passed in the mid-nineties laid the foundation for a new approach to natural resource use. By forming legally recognised community conservation organisations such as conservancies and community forests, people in communal areas can now actively manage – and generate returns from – natural resources in their area. This continues to encourage wildlife recoveries and environmental restoration. While community conservation organisations are resource management units, they are defined by social ties, uniting groups of people with the common goal of managing their resources. The first conservancies were registered in 1998, and the first community forests in 2006. CBNRM stands for community-based natural resource management and is used interchangeably with the term community conservation. Conservation hunting is legal, controlled trophy hunting of free-roaming, indigenous game with clear, measurable conservation and human development outcomes. Community conservation in Namibia: At the end of 2014 there were... • 82 registered communal conservancies • 1 community conservation association in a national park (Kyaramacan Association, managed like a conservancy) • 17 concessions in national parks or on other state land held by 20 conservancies (some shared concessions) • 32 registered community forests • 66 community rangeland management areas • and 2 community fish reserves What’s being achieved? Community conservation... • covers over 165,182 km², which is about 53.9% of all communal land with about 184,000 residents (another about 5,400 members of the Kyaramacan Association live in Bwabwata National Park) • of this area, conservancies manage 162,030 km², which is about 19.9% of Namibia • community forests cover 30,827 km², 90% of it overlapping with conservancies • community rangeland management areas cover 4,004 km², much of it overlapping with conservancies • from the beginning of 1990 to the end of 2014, community conservation contributed about N$ 4.15 billion to Namibia’s net national income • during 2014, community conservation generated about N$ 91.2 million in returns for local communities • community conservation facilitated 5,808 jobs in 2014 • 97 conservancies had a total of 184 enterprises based on natural resources in 2014 • community conservation supports wildlife recoveries and environmental restoration • Namibia’s elephant population grew from around 7,500 to around 20,000 between 1995 and 2014 • Namibia has an expanding free-roaming lion population outside national parks. Community conservation is about managing natural resources sustainably to generate returns for rural people. Conservancies, community forests and other community conservation initiatives create the needed legal framework for this. By choosing to live with wildlife, rural communities are broadening their livelihood options as well as enabling a healthier environment. Through wise and sustainable management and use, the resources are conserved for future generations while providing significant returns today.
Institutional development in conservancies in 2014

The information shows that conservancy management capacities fluctuate, influenced by staff and committee changes, as well as the degree of external support. Many conservancies have strong female participation and a substantial number of conservancies that used to be dependent on grant aid are now covering their operational costs from own income, with many also distributing benefits to members or investing in community projects. The Kyaramacan Association is included as a de facto conservancy.

Prior to Independence, without the existence of formal management structures and lacking ownership over resources, people in communal areas undertook few coordinated natural resource management activities. This resulted in fragmentation, neglect and over-exploitation. Today, community conservation not only monitors and manages resource use, it also provides legitimate structures for the tourism and conservation hunting industries, as well as a suite of other private sector, government and donor stakeholders, to formally engage with communities in an equitable manner. Legally recognised entities such as conservancies and community forests have empowered communities to stand up for their rights.

Building foundations

Institutional development

- good governance creates the basis for resource management and the capture and distribution of returns
- innovative resource management enables biodiversity conservation and sustainable use
- market-based approaches enable a wide range of community returns

Natural resource management

- innovative resource management enables biodiversity conservation and sustainable use

Business, enterprises and livelihoods

- market-based approaches enable a wide range of community returns

Community conservation means...

- contributing to improved democracy in rural areas
- empowering individuals, including women, to actively participate in decision-making
- employing staff to manage a broad range of resources
- working according to management and benefit distribution plans
- unlocking human potential by providing new access to diverse training and capacity building
- enabling controlled tourism development and conservation hunting activities
- covering an increasing portion of operational costs through own income
- linking into regional conservation structures

Governance at a glance:

At the end of 2014 there were...

- 45 management plans in place
- 20 sustainable business and financial plans in place
- 50 annual financial reports presented
- 60 annual general meetings held
- 10% female chairpersons
- 39% female treasurers/financial managers
- 39% female management committee members
- and 30% female staff members in communal conservancies in Namibia

What's being achieved?

Community conservation means...

- contributing to improved democracy in rural areas
- empowering individuals, including women, to actively participate in decision-making
- employing staff to manage a broad range of resources
- working according to management and benefit distribution plans
- unlocking human potential by providing new access to diverse training and capacity building
- enabling controlled tourism development and conservation hunting activities
- covering an increasing portion of operational costs through own income
- linking into regional conservation structures
Species richness and population health of wildlife in conservancies

The wildlife species richness map (left) indicates the percentage of all large wildlife species that historically occurred, which are currently present in a particular conservancy. The wildlife population health (right) indicates the percentage of all large wildlife species that historically occurred, which currently have a healthy population in a particular conservancy. Etosha, Mamili, Mudumu and the core areas of Bwabwata National Park are included on the maps for comparison.

<table>
<thead>
<tr>
<th>Percentage of all historically occurring large wildlife currently present</th>
<th>more than 90%</th>
<th>81 - 90%</th>
<th>71 - 80%</th>
<th>50 - 70%</th>
<th>less than 50%</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percentage of all historically occurring large wildlife with a currently healthy population</td>
<td>more than 80%</td>
<td>61 - 80%</td>
<td>41 - 60%</td>
<td>21 - 40%</td>
<td>less than 20%</td>
</tr>
</tbody>
</table>

At the end of 2014 there were:
- 83 conservancies using the Event Book monitoring tool
- 52 conservancies conducting an annual game count
- 4 national parks undertaking collaborative monitoring with conservancies
- 38 conservancies directly involved in tourism activities
- 70 conservancies holding quota setting feedback meetings
- 70 conservancies with own-use harvesting quotas
- 48 conservancies with conservation hunting concessions
- 20 conservancies with shoot & sell harvesting contracts
- 45 conservancies with a wildlife management plan
- 40 conservancies with a zonation plan
- 532 game guards working in conservancies (figures include 3 unregistered, emerging conservancies & the Kyaramacan Association)

Community conservation means:
- combating poaching and other illegal activities
- mitigating human-wildlife conflict and limiting losses incurred through living with wildlife
- zoning areas for different land uses to reduce conflicts
- enabling wildlife recoveries, effective natural resource management and environmental restoration
- working with neighbours to promote a large landscape approach to natural resource management
- black rhinos occur in 14 conservancies
- elephants occur in 48 conservancies
- lions occur in 24 conservancies
- species that had become locally extinct in the Zambezi Region, such as eland, giraffe and blue wildebeest, are thriving after re-introductions
- the Erongo-Kunene Game Count is the largest annual, road-based game count in the world

Natural resources at a glance:

- 83 conservancies using the Event Book monitoring tool
- 52 conservancies conducting an annual game count
- 4 national parks undertaking collaborative monitoring with conservancies
- 38 conservancies directly involved in tourism activities
- 70 conservancies holding quota setting feedback meetings
- 70 conservancies with own-use harvesting quotas
- 48 conservancies with conservation hunting concessions
- 20 conservancies with shoot & sell harvesting contracts
- 45 conservancies with a wildlife management plan
- 40 conservancies with a zonation plan
- 532 game guards working in conservancies (figures include 3 unregistered, emerging conservancies & the Kyaramacan Association)

Modern approaches have not only returned the rights to the people and the wildlife to the land, but are enabling an increasing range of returns from natural resources, which were unheard of only a few decades ago. This success is based on community empowerment, as well as innovative systems and tools that enable effective management and sustainable use of natural resources. These include the Event Book monitoring tool, annual game counts and quota setting, as well as wildlife management and zonation plans.

What's being achieved?

- combating poaching and other illegal activities
- mitigating human-wildlife conflict and limiting losses incurred through living with wildlife
- zoning areas for different land uses to reduce conflicts
- enabling wildlife recoveries, effective natural resource management and environmental restoration
- working with neighbours to promote a large landscape approach to natural resource management
- black rhinos occur in 14 conservancies
- elephants occur in 48 conservancies
- lions occur in 24 conservancies
- species that had become locally extinct in the Zambezi Region, such as eland, giraffe and blue wildebeest, are thriving after re-introductions
- the Erongo-Kunene Game Count is the largest annual, road-based game count in the world

... means ensuring that they are used wisely so that the resource base (the natural environment) stays healthy and maximum returns are generated without negative impact...
improving rural lives

Conservancies are showing that community conservation can generate a broad range of community and individual returns while covering its operational costs from own income. Community conservation is funding rural development projects and empowering communities, while individual households are benefitting through job creation and new income opportunities, as well as in-kind benefits and improved access to a range of services. Community conservation is diversifying options and increasing opportunities for rural people.

improving lives

to improve lives...

means facilitating economic opportunities and empowering people to make their own choices from amongst a range of livelihood options that fulfill their health and dignity existance...

CBNRM returns at a glance: At the end of 2014 there were...

- 40 joint-venture tourism enterprises with 708 full-time and 230 part-time employees
- 48 conservation hunting concessions with 134 full-time and 43 part-time employees
- 32 small/medium enterprises (mostly tourism/crafts) with 156 full-time and 43 part-time employees
- 680 conservancy employees
- 955 conservancy representatives receiving allowances
- 2,082 indigenous plant product harvesters
- and 765 craft producers

in communal conservancies in Namibia (part time employment includes seasonal labour)

What’s being achieved?

Community conservation...

• generated total cash income and in-kind benefits to rural communities of over N$ 91,155,126 in 2014; of this, conservation hunting generated N$ 21,861,482; tourism generated N$11,394,916 and indigenous plants generated N$ 142,915 in fees for conservancies
• conservancy residents earned a total cash income of N$ 44,049,635 from enterprise wages, of which N$ 26,396,250 was from joint-venture tourism, N$ 11,031,642 from conservancies, N$ 3,929,312 from conservation hunting and N$ 2,273,974 from SIMEs
• conservancy residents earned a total cash income of N$ 3,353,934 from indigenous plants and N$ 1,209,927 from crafts
• 522,104 kg of game meat worth N$ 10,510,880 was distributed to conservancy residents N$ 6,979,985 in cash benefits was distributed to conservancy residents and used to support community projects
• indigenous plant sales outside conservancies (mostly thatching grass) generated N$ 2,903,969 for communities and craft sales outside conservancies generated N$ 938,370

• indigenous plant sales outside conservancies (mostly thatching grass) generated N$ 2,903,969 for communities and craft sales outside conservancies generated N$ 938,370

Sources of returns to conservancies and their members in 2014

The spectrum of natural resource sectors generating returns for communities continues to widen. Joint-venture tourism and conservation hunting are making the greatest contributions. (Figures incl. Kyaramacan Ass. returns)

Waiting Romansia Roman, DamaraLand Camp, Torra Conservancy

Visiting She She Bike Tour Project
The future at a glance:

Community conservation may grow to...

- 90-100 conservancies and 40-50 community forests
- cover over 21% of Namibia and well over 50% of all communal land
- embrace up to 15% of all communal area residents and well over 50% of rural communal areas residents in suitable areas

What might be achieved?

Community conservation can...

- facilitate significant further growth of tourism in communal areas and increase local involvement
- enhance the reputation of communal areas as offering some of the country’s most spectacular destinations
- entrench Namibia’s position as offering some of the best conservation hunting on unfenced land in Africa
- mitigate the effects of climate change by reducing dependence on subsistence agriculture
- maximise the potential of indigenous plants through further strategic international partnerships
- strengthen incentives for people to live with and manage wildlife so our children’s children can continue to share in this important African heritage

New for 2015:

- roll-out of SOPs and mandatory conservancy compliance requirements by the MET
- roll-out of a game guard certification system

The economic efficiency of CBNRM

Since 1990, the programme has had an economic internal rate of return of 23% and has earned an economic net present value of some N$ 803 million. This is a highly positive economic return for a programme investment.

National economic returns and programme investments

Estimates of the national economic returns from CBNRM compared to economic investment costs

In 2014, the net national income (NNI) contribution made by CBNRM was about N$ 530 million. Between 1990 and 2014, the cumulative value of the NNI contributions amounts to an estimated N$ 4.15 billion.

The graph also shows the value of spending on the CBNRM programme each year, which, cumulatively adds up to about N$ 7.8 billion of investment between 1990 and 2014. Donors supplied most of the funds, while the MET and NGOs also provided inputs, mainly as ‘in-kind’ contributions such as staff, vehicles and other kinds of support.

The biggest challenges?

- enabling optimum conservancy governance capacities, effective decision-making and wise leadership, as well as pro-active members
- countering the pressure (based on urban moral ideals) to ban the legal and well-controlled sustainable use of wildlife
- optimising land allocation and administration in communal areas
- ensuring long-term technical support to community conservation structures
- achieving self-sufficiency and programmatic sustainability
Community conservation grew out of the recognition that wildlife and other natural resources were disappearing in many communal areas, and that these losses could be reversed, and both rural livelihoods and the environment could be improved, if local communities were empowered to manage and use the resources themselves.
