the state of community conservation in Namibia

...means practising legally-entrenched community-based natural resource management under the guidance of a formal national-level CBNRM programme. Communal conservancies, community forests and other community conservation organisations are officially registered entities with legal rights to manage the natural resources within their defined jurisdiction. Local authorities are empowered to generate their own environmental affairs and the generated returns flow directly to communities.

wildlife, plants, fish and other resources are being sustainably managed across large areas of land through conservation partnerships, enabling healthy environments.

about 184,000 people living in community conservation areas

another 5,400 members of the Kyaramacan Ass. live in Bwabwata N.P.

about N$ 91.15 million in cash income and in-kind benefits generated for local communities through community conservation includes some CBNRM returns from outside registered community conservation areas

sectors generating the returns were: tourism, related SMEs and craft sales with about N$ 45.27 million sustainable consumptive game use with about N$ 36.41 million indigenous plant products with about N$ 7.60 million and miscellaneous income of about N$ 1.87 million
