Ehi-Rovipuka Climate and Vegetation Report

Adapting in response to the current environmental conditions ...

Seasonal trends in rainfall and vegetation (2020 / 2021 Season)

Vegetation cover trend (2000 - 2020)

High vegetation cover is good because more rainwater is prevented from running off, causing less erosion. Also the soil is shaded leading to a decrease in soil temperature and evaporation.

Fire management

Burns between 2000 and 2020 When and where it burnt in 2020

No fire monitoring

Times burned

1 - 2 3 - 5

6 - 9 10 - 13 >13 Prevent late burns next season

Burned area

April - July

Aug - December

Vegetation productivity (February to April) 2021

Forage availability

During the growing season enough forage must be produced to sustain livestock and game until the next rainy season

Below normal forage availability
- Enough for livestock and
game?

Management Options

-Move animals to better grazing

-Do nothing

-Buy more animals

Climate and vegetation patterns assist in our understanding of the status of wildlife and livestock in the conservancy for the effective management of these resources.
