## Muduva Nyangana **Climate and Vegetation Report**

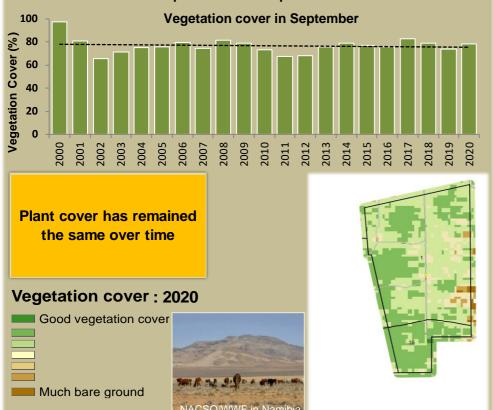

Adapting in response to the current environmental conditions ...

Seasonal trends in rainfall and vegetation (2020 / 2021 Season)

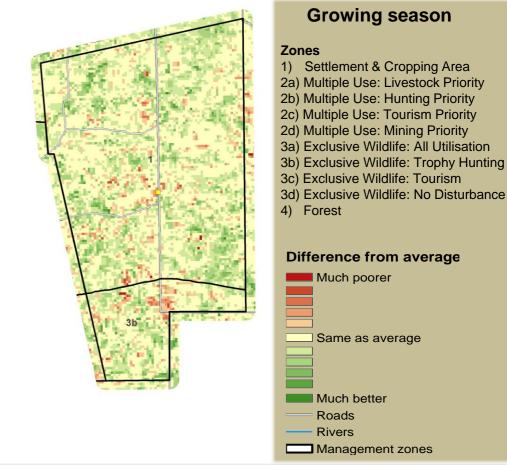

#### Vegetation cover trend (2000 - 2020)

High vegetation cover is good because more rainwater is prevented from running off, causing less erosion. Also the soil is shaded leading to a decrease in soil temperature and evaporation.

## **Vegetation productivity (February to April) 2021**

### Fire management

Burns between 2000 and 2020

When and where it burnt in 2020

Excellent normal Very poor

# During the growing season enough forage must be rainy season 20

Forage availability -Do nothing produced to sustain livestock and game until the next -Buy more animals -Move animals to better grazing -Sell old and unproductive animals -Acquire additional forage 10 -10 -30

Normal forage availability

**Management Options** 

**Times burned** 

**3** - 5

> **6** - 9 **10 - 13 =** >13

Prevent late burns next season

Aug-Dec: 133.6 sq.km, 21.7 %

Apr-Jul: 12.2 sq.km, 2 %

April - July

**Burned area** 

Aug - December

Climate and vegetation patterns assist in our understanding of the status of wildlife and livestock in the conservancy for the effective management of these resources.
