Trends - Number of animals per 100km

Total Population Estimates

Species	Population estimate	Lower 95% CL	Upper 95% CL
Gemsbok (U)	316	108	929
Kudu (U)	364	163	815
Ostrich (U)	2,836	2,002	4,017
Springbok (HN)	19,228	11,674	31,668
Steenbok (HN)	1,011	519	1,968
Hartmann's Zebra (U)	4,208	2,287	7,743

All above estimates are derived using DISTANCE analysis. This takes account of drop off in detection with distance from the transect line. They are conservative estimates as 35% of the count area is not sampled (due to inaccessibility) and is consequently assumed to hold no animals. Model selection: U = uniform key; HN = half normal

Animals seen during this count and minimum estimates

	Total	Anabeb	Ehi-Rovipuka	Marienfluss	Okangunduma	Okondjombo	Omatendeka	Ombujokangundi	Ongongo	Orupembe	Orupupa	Otjambangu	Otjikondavirongo	Otjiu-west	Otuzembia	Ozondundu	Puros	Sanitas	Sesfontein

Total area (km ²)	28,288	1,636	1,979	3,034	1,130	1,643	1,613	657	619	2,616	1,775	348	1,067	1,208	741	743	3,564	1,446	2,469
Number of routes	74	5	5	6	3	4	4	3	5	6	3	1	4	2	3	2	6	4	8
% Area excluded	35	5	5	6	3	4	4	3	5	6	3	1	4	2	3	2	6	4	8

Species	Gemsbok	Giraffe	Kudu	Ostrich	Springbok	Steenbok	Hartmann's Zebra
Gemsbok					19 (267)		
Giraffe	8 (16)	33 (120)			2 (10)	3 (6)	
Kudu			5 (32)				1 (4)
Ostrich	4 (11)			29 (197)	27 (142)	6 (22)	33 (128)
Springbok	235 (946)	8 (25)		326 (1,403)	47 (248)	28 (232)	54 (222)
Steenbok		2 (17)		2 (11)		1 (4)	5 (23)
Hartmann's Zebra	317 (976)	14 (47)			32 (152)	39 (121)	

Values without brackets are numbers of animals seen along transects. Values inside brackets are minimum estimates assuming all animals within 500m on each side of the transect line are detected i.e. there is no adjustment for drop off in detection with distance from the transect line. In addition, for springbok, gemsbok and giraffe, large groups were excluded from extrapolations and added afterwards.

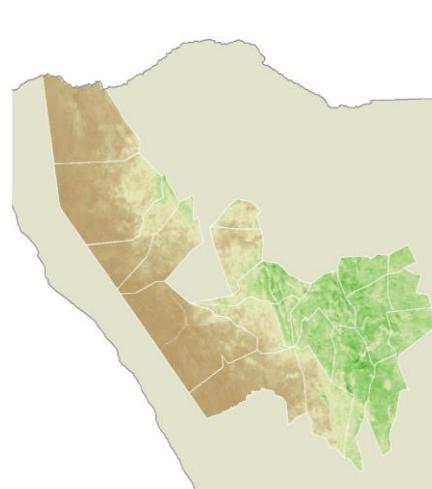

The sum of these values will be significantly lower than the totals indicated in the top left table as the total estimates take account of species detection curves.

Rainfall

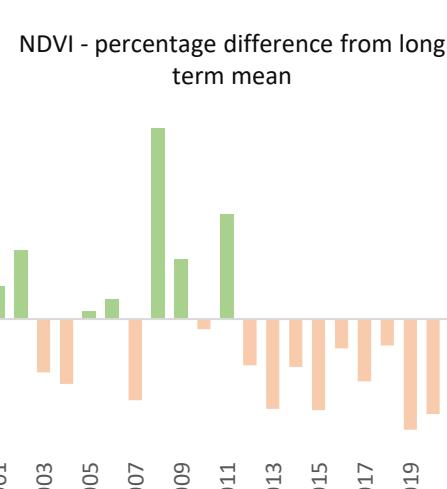

The rainfall season is from July to June and values are an average for the whole area. The year represents the season immediately prior to the count.

Vegetation

NDVI is a measure of the density of chlorophyll in vegetation cover. It can be used as an indicator of the amount of biomass available to wildlife. The map shows the NDVI status in the current year (Feb-Apr) and the trend indicates the average deviation of northern area conservancies from the long-term mean, in each year.

Mortalities
