maximi wildlife returns by minimising threats...

Human wildlife conflict Poaching Indicators erformance in 2020 Human wildlife conflict trend Number of incidents per year the chart shows the total number of incidents each year, Commercial poaching is a serious threat to conservancy benefits. The chart shows the subdivided by species, grouped as herbivores and predators **Performance** number of incidents per category Hyena Cheetah uate staffing Subsistence Leopard Other Predators Commercial 2 Adequate expenditure Other Herbivores Elephant High Value 3 Audit attendance 2.5 50 4 NR management plan 40 5 Zonation 1.5 6 Leadership 1 20 7 Display of material 0.5 8 Event Book modules 9 Event Book quality 2017 2013 2014 2015 2016 2011 2018 2019 2020 10 Compliance 11 Game census Most troublesome problem animals 2018-2020 Traps and firearms recovered number of incidents per category 12 Reporting & adaptive management the chart shows the number of incidents per species for the last 3 years; the darkest bar (on the right) indicates the current year for each species 13 Law enforcement ☐ Firearms recovered The most troublesome species ■Traps/snares recovered 14 Human Wildlife Conflict 16 1.2 in 2020 are on the left 14 15 Harvesting management 1 12 8.0 16 Sources of NR income The least troublesome species 0.6 in 2020 are on the right 17 Benefits produced 6 0.4 18 Resource trends 0.2 19 Resource targets 202 202 204 202 204 202 204 202 200 Hyaena Cheetah Caracal Baboon Key to performance indicators Type of damage by problem animals 2018-2020 Arrests and convictions weak/bad the chart shows the number of incidents per category for the last 3 years; reasonable good number of incidents per category the darkest bar (on the right) indicates the current year for each type Performance is assessed on a scoring system from zero (none) to a 120 maximum of between 3 and 6 (strong/excellent) depending on the ■ Convictions 100 80 Indicators 1-17 reflect the performance of the management team in 3 60 place in the conservancy and an efficient team can achieve a good 40 rating in all 17 indicators. Indicators 18 & 19 are influenced by external factors and are not 20 considered a reflection of conservancy management. They indicate the current status of wildlife in the conservancy in relation to a Crop damage Other damage Human attack Livestock theoretical optimal situation. 2012 2013 2014 2015 2016 2017 2018 2019 2020

Wildlife removals – quota use and value

Potential value estimates (N\$) for a single animal: • Potential trophy value - the average	Species	Quota 2020			Animals actually used in 2020						Potential	
		Total	Trophy	Other Use	Trophy	Own Use &	Shoot &	Capture & Sale	Problem Animal	Total Use	Trophy Value N\$	Other use Value N\$
trophy value for that species in the conservancy landscape	Kudu*	1		1		Premium						10,842
trophy values vary depending on trophy quality, international recognition of the hunting operator and the hunting area												
Potential other use value - the average meat value for common species												
or												
the average live sale value of each high value species (indicated with an *). High value species are never used for meat												
Fractions of animals indicate that a quota of 1 animal was awarded with conditions i.e. a) over a period of several years and/or b) is shared with other conservancies

Natural Resource Report continued...

monitoring numbers and trends for a healthy conservancy...

Current wildlife numbers and status

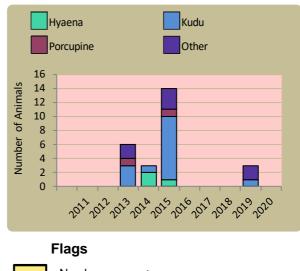

Vegetation monitoring

Green vegetation index (NDVI). Maps show vegetation cover during Feb-Apr of the current year and the difference between the current year and the long-term average (2003-2018)

NDVI 2019

decreasing

Wildlife mortalities

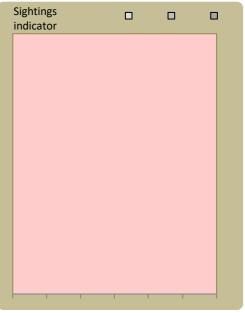

No change Increasing

No change,

rarely recorded

Locally rare species

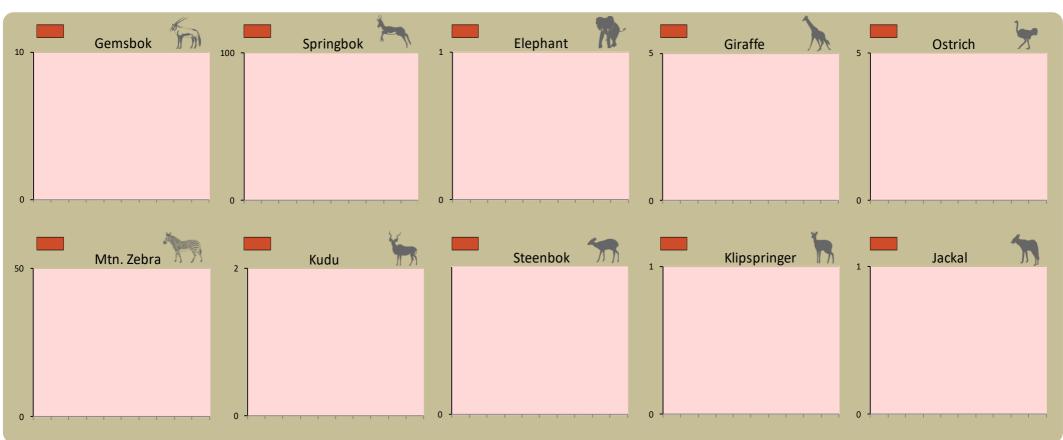

Locally rare species are not found very often in the conservancy and need special conservation attention.

Annual game count

Charts show the number of animals seen each year per 100 km driven during the game count. As a point of reference the dashed horizontal line represents the combined 10 year average in Palmwag and Etendeka concessions. Status flags reflect the general count trend over the last 5 years.

NDVI 2019 - NDVI (2003-2018) Average

Predator monitoring

charts show the average number of animals seen per Event Book each year status barometers reflect the general sightings trend over the last 5 years
